

## CryptoNext Security Unveils New Visual Identity and Asserts Leadership in Cryptography Management

- This new brand identity, along with a completely redesigned website, marks a major strategic shift for CryptoNext Security.
- Building on its role as a pioneer and European leader in post-quantum cryptography (PQC), CryptoNext Security places crypto agility at the core of its mission: helping organizations manage cryptographic risk and ensure lasting compliance in the era of quantum cyber threats.

---

**Paris, July 9, 2025** – CryptoNext Security, a leading European player in post-quantum cryptography and related remediation solutions, unveils today its new visual identity and launches its redesigned website. These initiatives reflect a major strategic shift for the company, which is now expanding its scope to encompass the comprehensive and agile management of cryptographic risk and compliance for organizations.

Since its inception in 2019, CryptoNext Security has established itself as a leading player in post-quantum cryptography. Backed by over 25 years of academic research and actively engaged in shaping cryptographic standards, the company supports organizations through every stage of their transition to crypto-agile cybersecurity: from cryptographic asset discovery and inventory to remediation and the deployment of resilient solutions that address both the quantum threat and evolving regulatory requirements.

Today, the company enters a new phase by placing crypto-agility at the core of its mission, helping organizations manage cryptographic risk and ensure long-term compliance. "This strategic shift reflects a clear reality: the lessons learned from previous cryptographic migrations show just how complex and difficult this process is to manage without agile and centralized cryptography governance," explains Florent Grosmaître, CEO of CryptoNext Security. "We now aim to support our clients with a continuous, dynamic, and secure approach to post-quantum and future-proof solutions."

## **About CryptoNext Security:**

CryptoNext Security is a software provider specializing in post-quantum cryptography (PQC) and crypto-agility management. Founded in 2019 and leveraging over 25 years of academic research, the company supports organizations in their transition to resilient cybersecurity in the face of quantum threats, empowering them to effectively manage cryptographic risks and ensure long-term compliance. Its solutions enable companies to map, migrate and govern cryptography in a rapidly evolving security landscape. CryptoNext Security serves major clients and system integrators across the finance, defense, industrial, and public sector markets.
